Remotely triggered wet slab Taylor Fork

Date
Mon, 04/15/2024 - 01:05
Activity
Snowmobiling

From IG: A group of riders noted very wet snow west of Cabin Creek and Southwest of the Taylor Fork. They were sinking to the ground where it was unconsolidated. The group remotely triggered a wet slab avalanche from the ridge top. There were shooting cracks that connected their location to the avalanche. This is an interesting of persistent weak layer and wet snow avalanche problems.

Region
Southern Madison
Location (from list)
Taylor Fork
Observer Name
Marcus Harry
