Activity

Skiing

Went for a look around on the ridge line between Jones Creek and Truman Gulch. Depth varied from 15-20cm to 100cm. Ectos did not propagate thru the column but was breaking under my shovel at 10, 12 and 14 taps in the facet layer 20 cm from the ground, above the m/f crust. Numerous pockets cracked and whumped for me, and a 26 degree slope moved a few inches after it settled. I sent Alex some photos that you are free to use if you'd like. Most pockets were wnw aspect but one was a bit more southerly, so route finding was a good challenge

Region

Bridger Range

Location (from list)

Truman Gulch

Observer Name

Pat Hinz
