

Lick Creak

Date

Sun, 12/19/2021 - 14:50

Activity

Skiing

My partner and I dug a pit at the bottom of the lick creak meadow today in a wind protected area about 50-60cm deep to dirt. We scored a ECTN 20 and were unable to shear the column off across the entire 90cm block.

The snow above our pit was significantly shallower and very wind affected with a punchy wind crust in the ski down

Region

Northern Gallatin

Location (from list)

Lick Creek

Observer Name

Colten crowe
