Hayden Creek NNE aspect at 9700'

Date Mon, 12/20/2021 - 13:00 Activity Skiing

On NNE aspect at 9700' we saw multiple shooting cracks propagating over 30 feet from our skis. Slopes were increasingly wind-loaded throughout the day, with noticeably stiffer wind slabs in the afternoon compared to the morning. No avalanche activity.

Region Cooke City Location (from list) Hayden Creek Observer Name Peter Breigenzer
