

Bracket Creek/ Texas Meadow area

Date

Sun, 01/02/2022 - 10:05

Activity

Skiing

Shallow snowpack and wind affected top layer 1". Pit was dug on the climbers left (south) of the slope just as you reach the bottom of the glade. No signs of obvious instability but large (see photo) layer of facets on a hard ground layer. Also a good reminder to revisit snow pit test methods.

Region

Bridger Range

Location (from list)

Texas Meadow

Observer Name

Brad Beggs
