

Divide Peak

Date

Sun, 01/09/2022 - 14:00

Activity

Skiing

We dug a pit on the east ridge of Divide Peak on a southern aspect at approximately 9760ft. There was a calm breeze from the northwest and the day was mostly sunny. We recorded an HS of 115cm. We observed that the top layer of recent snow/ wind drift (~8cm) slide readily when isolated, but little sluff actually occurred after our group, and many other groups, skied the slope. We recorded an ECTN 8 @ 8cm, and an ECTN 30 @ 74cm. At around 3pm we began to notice the effect of the sun and observed an occasional roller ball on due south aspects.

Region

Northern Madison

Location (from list)

Divide Peak

Observer Name

Erich Schreier
