

Small slide Bridger Bowl

Date

Fri, 11/18/2022 - 15:48

Activity

Snowboarding

triggered a small wind slab in sluice box today. this was not a surprise as all of the wind loaded areas had shown cracking and instability on the way up. though these other areas exhibited the same instability, this little pocket in sluice was the only spot steep enough to run. wanted to stop and measure slope angle but the dog was getting cold

Region

Bridger Range

Location (from list)

Bridger Bowl

Observer Name

Justin Armer
