Slide on north face of blackmore

Date Wed, 02/15/2023 - 11:45 Activity Skiing

Light winds when I was up there with little to no wind effect on the east face. Saw this slide with an 8-12in crown and 100ft wide on the north face, didn't see any other activity asides from some point releases on really steep east aspects.

Region Northern Gallatin Location (from list) Mt Blackmore Observer Name Ben Farrell
