Activity

Skiing

Toured out of Canyon Village in the park on Dunraven Peak near Mt Washburn. South aspect around 9100. Lots of whumpfs and settlements. Really wild how far they were traveling. ECTP1 on the facets above a crust. Didn't believe it and had an ECTP5 nearby. Really glad we had planned to enjoy easy meadow skipping for the day instead... 60cm HSN, crust is about 25cm down. Just wanted to put it on your radar with what is being seen around Cooke. Really variable surface too with another crust forming and large SH.
