

Wind Slab South of Cooke City

Date

Sun, 02/25/2024 - 16:45

Activity

Skiing

Toured up the west side of Woody via Central Park approach. Moderate to high wind gusts at the ridge line. Skied a couple laps in variable conditions on Sub bowl and then returned to the West aspect for a lap down South Central .

Traversed into the tube at tree-line roughly 9900' and triggered a small wind slab. Crown was around ~1 foot deep and maybe 40 feet wide. Possibly stepped down a bit once in the tube and then ran for about 300 feet.

HS-AS-D1-R1

Region

Cooke City

Location (from list)

Woody Ridge

Observer Name

N. Dogg
