

Collapsing / Poor stability test scores, West Henderson

Date

Sat, 12/21/2024 - 11:05

Activity

Skiing

We toured above 9000' on a W to SW aspects on Henderson Mtn. We experienced several collapses and had propagation in multiple ECTs performed. HS varies between 85-105cm. Snowpilot pit is from 9820' W aspect, photo from 9940': both with ECTP results.

Snow surface variable with wind boards and radiation crusts, mixed with soft snow in shaded aspects.

Region

Cooke City

Location (from list)

Daisy Pass
